Certainly! **Airplane storage yards**, also known as **aircraft boneyards**, play a fascinating role in the aviation world. Let's explore them:

1. **Davis-Monthan Air Force Base (AMARG)**, located in Tucson, Arizona, is the **largest aircraft boneyard in the world**. It houses over **4,400 retired military aircraft**. These planes are either temporarily stored or have their parts removed for reuse or resale before eventual scrapping[2]. AMARG's vast inventory includes various aircraft types, from fighter jets to transport planes.
2. **Purpose and Functions**:
    - **Storage**: Aircraft that are temporarily out of service but expected to return to the fleet find a home here.
    - **Parts Reclamation**: Usable parts are inspected, overhauled, and held until needed by active aircraft.
    - **Dismantling**: Some planes are dismantled for scrap metal or recycling.
3. **Other Notable Boneyards**:
    - **Southern California Logistics Airport**: Located in Victorville, California, it hosts a significant number of retired commercial airliners.
    - **Pinal Airpark**: Situated in Arizona, it serves as a storage and maintenance facility for various aircraft.
    - **Mojave Air and Space Port**: Mojave, California, is home to both retired military and civilian planes.
    - **Teruel Airport (Spain)**: In Europe, Teruel houses aircraft awaiting resale or lease.
4. **Secrets of the Desert Boneyards**:
    - Each storage yard has a range of functions, from storing planes to reclaiming usable parts.
    - The process involves meticulous inspection, overhauling, and careful preservation[5].

So, next time you see a retired plane parked in one of these boneyards, remember that it's not the end—it's just a new chapter in its aviation journey!
